

100 AI Use Cases Organized by Skill Level

Based on 1,915 registrant responses, the following 100 ways to use generative AI are organized into three tiers of skill and complexity: Beginner, Intermediate, and Advanced.

Beginner — Simple, Single-Task Uses

Low complexity, minimal prompting, everyday shortcuts

1. Drafting and replying to emails
2. Proofreading and spell-checking documents
3. Summarizing meeting notes
4. Asking general questions and basic research
5. Simplifying overly wordy documents
6. Checking grammar and tone in writing
7. Creating event flyers and graphics
8. Generating email subject lines
9. Rewording emails for a different tone
10. Searching for topics and background information
11. Creating simple checklists
12. Translating documents or text
13. Summarizing articles or reports
14. Writing thank-you notes and acknowledgment letters
15. Generating ideas for social media posts
16. Creating basic meeting agendas
17. Reformatting documents (e.g., bullet points to paragraphs)
18. Daily task planning and reminders

19. Brainstorming names or titles
 20. Generating icebreaker questions
 21. Drafting a quick bio or staff introduction
 22. Checking IRS regulations or policy rules
 23. Generating FAQs
 24. Suggesting wording for signage or announcements
 25. Writing simple job descriptions
 26. Answering "how-to" questions on the spot
 27. Creating captions for photos or graphics
 28. Editing emails to remove overly emotional language
 29. Looking up definitions or concepts quickly
 30. Cleaning up raw notes into readable summaries
 31. Creating outlines for short documents
 32. Getting suggestions on how to respond to a complaint
 33. Rephrasing content for different audiences
 34. Summarizing email threads
 35. Generating filler content for templates
-

Intermediate — Applied, Multi-Step Uses

Requires prompting skill, judgment, and iterative refinement

36. Creating rubrics for assignments
37. Developing case studies for class use
38. Drafting accreditation mapping letters
39. Building course outlines and syllabi
40. Designing discussion prompts and engagement activities
41. Generating new test banks and assignments

42. Developing student training materials
43. Drafting strategic communications for donors
44. Summarizing and synthesizing research
45. Creating slide decks from written content
46. Generating contact reports
47. Cross-referencing state documents with program documents
48. Reviewing and editing contracts
49. Writing SOPs and workflows
50. Building project timelines and work plans
51. Constructing agendas for complex meetings
52. Generating action plans to support students
53. Drafting speeches for executives or speakers
54. Compensation benchmarking research
55. Comparing data from multiple sources
56. Summarizing survey comments and open-ended responses
57. Writing letters of recommendation drafts
58. Creating course review materials
59. Developing residential education curriculum
60. Generating image assets for academic presentations
61. Reformatting work orders and operational documents
62. Drafting policy language and updates
63. Podcast content and script generation
64. Using AI as a thought partner to vet ideas
65. Brainstorming faculty development activities
66. Analyzing alumni workforce data
67. Drafting outreach communications for prospective students

- 68. Creating brand and storytelling guideline comparisons
 - 69. Generating visual designs for campaigns
 - 70. Writing job ads and hiring language
-

Advanced — Complex, Integrated, or Technical Uses

Requires technical knowledge, system design, or institutional-level thinking

- 71. Debugging code across multiple languages
- 72. Writing HTML/CSS for email templates and web design
- 73. "Vibe coding" — using AI to prototype software solutions
- 74. Statistical analysis and debugging analytical scripts
- 75. Building Excel and spreadsheet formulas and scripts
- 76. Developing agentic AI prompts and workflows
- 77. Creating AI-powered class tutors or assistants
- 78. Identifying gaps between complex documents with citations
- 79. Developing programming models and LLM integrations
- 80. Using AI agents in multi-step institutional workflows
- 81. Building AI tools to support student advising
- 82. Designing AI-focused assignments for students to learn AI literacy
- 83. Cross-referencing CIP codes used by comparable colleges
- 84. Analyzing publicly available datasets with AI
- 85. Creating AI-generated photo repair and image editing
- 86. Building AI workflows for institutional reporting
- 87. Automating contact center responses using AI
- 88. Developing AI policy frameworks for the institution
- 89. Using AI to perform complex financial and probability calculations
- 90. Generating programming models for financial planning

91. Integrating AI into research workflows for grant writing
92. Using AI to develop and test new institutional KPIs
93. Designing AI-assisted peer review processes
94. Building AI tools for accreditation compliance tracking
95. Creating AI chatbots for student services
96. Using AI to analyze workforce trend data at scale
97. Developing AI governance and ethical use frameworks
98. Automating curriculum mapping across programs
99. Prototyping AI models for enrollment prediction
100. Deploying AI across interdepartmental operations (e.g., multi-workflow adoption)
