

All Campus Essentials – AI in the Flow of Work – Week One

Agenda

- **Welcome** — The month's topic, why it's showing up now, and what to expect from the three-part series.
- **Where we're at** — Sabrina and Sarah on adopting AI in administrative work with the roadblocks, the anxieties, and how they got past them.
- **100 Ways to Use AI** — A look at how your peers are already using AI, plus a live walkthrough of how the document was built.
- **Campus build** — **Chris Gott, Albion College.** A contract evaluator and summarizer he built.
- **Framework** — **Tawnya Means.** A practical way to identify worthwhile AI opportunities: friction, workflow, safeguards, measurable impact.
- **Campus build** — **Brittany Torres, Bethany College.** A handbook tool she built.

Use the chat throughout — it moves fast, but the recording, slides, chat, and resources all come to you afterward.

Resources

- [Synthetic Practice Data Set](#)
- [100 Ways Your Peers Are Using AI](#)
- Submit an idea for the Week 3 live build: <https://forms.gle/pCFvEG2sHKdDfMDEA>
- [From Friction to Impact: A Practical Framework for Worthwhile AI Opportunities](#)
- [CIC AI Opportunity Framework slide deck](#)
- Session recording and slides will be saved here later today:
https://cic44.sharepoint.com/:f:/g/lgDIHNDD1w1lRYtAgabCx3GyAeZBSOWIMXy_uLgCXYI568c?e=2WwRoR
 - **If you have difficulty accessing the session materials, try clearing your cookies or opening the link in an incognito browser.*

Follow-up email with the recording, slides, and resources arrives by Monday from sabrina@councilofindependentcolleges.ccsend.com.

Exercise: build your own 100 Ways document

This is the demo you'll watch live, and a good first use case for AI. Four moves:

- **Collect.** Gather messy examples from real work.
- **Cluster.** Ask AI to group them by job-to-be-done.
- **Clean.** Remove identifying details and duplicates.
- **Convert.** Turn the patterns into a useful handout.

To run it yourself:

1. Open the synthetic practice set (link below) so nothing real is at risk on your first run.
2. Paste 20 to 40 raw examples into one place. Don't tidy them first — the messiness is the input.
3. Ask AI to group them by the job each one is getting done, and to name each group in plain language.
4. Ask it to strip duplicates and identifying detail, then read every line yourself.
5. Ask for a one-page handout: short intro, groups as headings, three to five examples under each.
6. Add one example only you could have written, fix anything that sounds like no one on your campus, and put your name on it.

Prompt starters

"Here are raw examples of how colleagues use AI at work. Group them by the job each one is getting done. Name each group in plain language. Do not invent examples I did not give you."

"Now remove duplicates and anything that could identify a person, office, or institution. Show me what you removed and why."

"Turn this into a one-page handout for staff who are new to AI. Plain language, no hype, no more than five categories."

Advanced exercise: the document you'll have to write again next month

The 100 Ways exercise produces a document. This one produces a tool for a task that's already coming back. Everyone has something they write on a schedule: a weekly update, a monthly enrollment or budget report, standing committee minutes, a board summary, an orientation email that goes out every term. Pick one of those and you'll finish with a reusable prompt instead of another one-off draft.

1. Pick your recurring document. Something you produce at least monthly. Open the last two versions you wrote. Use ones that are already shareable, or strip names, ID numbers, and sensitive figures before you paste anything.

2. Have AI reverse-engineer your template. Paste both versions with this prompt:
"These are two versions of a document I produce regularly. Reverse-engineer the pattern: the sections, the order, the level of detail, the tone, and what information each section requires as input. Don't rewrite them — describe the template."
3. Turn the pattern into a tool. *"Now write me a reusable prompt I can run each cycle to produce this document, plus a checklist of the inputs I need to gather before running it. Include instructions about tone and what to leave out."*
4. Test it. Run that prompt against the raw inputs for your current cycle. Don't clean up the result yet — you need to see what it actually produces.
5. Grade it against the real thing. Put AI's draft next to the version you wrote yourself and mark three columns: what it got right, what it got wrong, and what only you could have known. That third column is the point of the exercise. It's usually the institutional knowledge, the political context, or something that happened in a hallway.
6. Fix the prompt, once. *"Here's what was wrong or missing in your draft: [list]. Revise the reusable prompt so those don't recur. Add a line telling me which parts of the output I must always verify myself."*

Save the revised prompt and the input checklist somewhere you'll find them next cycle.

- Not sure what to pick? Recurring documents that work well for this: a weekly or monthly unit update, meeting minutes for a standing committee, a monthly enrollment or budget summary, a board or cabinet report, a recurring email to students or parents, an annual report section you rewrite each year, a standard letter template.
